# WET TRANSFERS

The biggest issue relating to using ordinary decals is the varnish which creates a glossy film around the decal. It is quite hard to work with classic decals the way to make this film invisible and it is impossible to reach a good result in case of metallic surfaces. OK, there are dry transfers on the market but work with them is also quite uncomfortable, it is hard to place them correctly and a modeler has the one chance only.

HGW's Wet Transfers are similar to ordinary decals. It is possible to move them during the attaching process and to find the best position. Then just push the water from below the transfer, let it dry for few hours, remove the transfer foil and the work is done. Only text or symbol stays attached to the surface.

# F-4 Phantom II - Stencils 1/48 - 248020

Stencils for F-4 Phantom II (Eduard, Academy) in 1/48 scale. Wet transfer technology means that decal doesn't leave any signs of varnish or typical film after its application, so only text or symbols stay attached to the surface.

# TRANSPARENT DECALS

A5 sheet. This type is transparent, so it is possible, through base colour, to regulate final shade of the decal.

Pasted/fixed/glued, puttied and polished model paint by base white (it is suitable to polish also this coloured layer before applying wooden decals). The decals are transparent, so it is necessary to apply base colour. It is possible to mark off single panels by using different shades of base colour (white, of white, yellow). Then cut required shape of panel (with 2 mm overlap) and apply as same as ordinary decal (use Mr. Mark Setter, Mr. Mark Softer). After these processes cut protruded wooden decal with very sharp knife.

By this technique it is possible to create very believable imitation of the wooden surface without skill in using of oil paints.

Light wood - Transparent (NO GRID)

Dark wood - Transparent (NO GRID)  
1/32 - 532058

Dark wood - Transparent (NO GRID)  
1/48 - 548026

Light Plywood - Transparent (NO GRID)  
1/32 - 532059

# SEATBELTS

HGW seatbelts were and still are something like revolution in plastic scale models market. They are made from real textile and for the most realistic look we apply very high quality printing techniques on them. We are focused on belts fall into the first half of 20th century at the moment but we are working some projects related with modern airplanes. It is not well known fact that we produce also belts for sport cars. The main technological improvement in development of our premium product was changeover to laser precut seatbelts. This made the use and application of them more comfortable and easier and at the same moment quality of whole product went higher because we started to use laser for simulation of belts stitching

# Albatros D.V / D.Va - Seatbelts 1:32 - 132611

Textile seat belts designed for aircraft Albatros D.V / D.Va by Wingnut Wings. Belts are made from real microfibre and in combination with included photo etched buckles they look highly realistic. This product is available in 1/32 scale.
