GREGA KRIZMAN

Hello everybody,

HGW's e-shop is available again for customers from all over the world. We're sorry for the temporary shutdown but it was necessary to upgrade our software in order to improve your safety and shopping comfort. As usual with good news bad news goes as well therefore we are sorry in advance for the fact that everybody has to create a new account. We didn't want to transfer your personal data anyhow to avoid putting your private information in danger. Thank you for your understanding.

Zdravíme všechny fanoušky.

HGW e-shop je opět v provozu pro zákazníky z celého světa. Omlouváme se za dočasnou odstávku, ale už bylo nutně potřeba upgradovat software v zájmu zvýšení vaší bezpečnosti během nakupování. Jak to bývá, s dobrými zprávami chodí i ty špatné, tudíž přijmete omluvu za nutnost znovu se zaregistrovat v našem e-shopu. S ohledem na bezpečnost vašich osobních údajů jsme se rozhodli s nimi nehýbat. Děkujeme za shovívavost a zachovejte nám přízeň.

WET TRANSFERS

The biggest issue relating to using ordinary decals is the varnish which creates a glossy film around the decal. It is quite hard to work with classic decals the way to make this film invisible and it is impossible to reach a good result in case of metallic surfaces. OK, there are dry transfers on the market but work with them is also quite uncomfortable, it is hard to place them correctly and a modeler has the one chance only.

HGW's Wet Transfers are similar to ordinary decals. It is possible to move them during the attaching process and to find the best position. Then just push the water from below the transfer, let it dry for few hours, remove the transfer foil and the work is done. Only text or symbol stays attached to the surface.

SEATBELTS

HGW seatbelts were and still are something like revolution in plastic scale models market. They are made from real textile and for the most realistic look we apply very high quality printing techniques on them. We are focused on belts fall into the first half of 20th century at the moment but we are working some projects related with modern airplanes. It is not well known fact that we produce also belts for sport cars. The main technological improvement in development of our premium product was changeover to laser precut seatbelts. This made the use and application of them more comfortable and easier and at the same moment quality of whole product went higher because we started to use laser for simulation of belts stitching
